

# Silhouette adhesive vinyl

1

Open or create an image in the Silhouette software.

2

Load your vinyl directly into the Silhouette with no cutting mat. Select "Silhouette Vinyl" in the media menu of the cut settings. Your speed and thickness should be set at 8 and 12, and you should be using the blue cap.

3

After your image is cut, remove the vinyl from the Silhouette and peel away the negative space, so all that remains on the vinyl backing is your design.

4

Cover the vinyl design with a section of transfer paper and smooth it down using the scraper tool.

5

When you lift the transfer tape, the vinyl image will be held in place making it easy to arrange on your project.

6

Use the Silhouette scraper to transfer the vinyl to a clean dry surface. Rub the vinyl firmly on the project and then lift the transfer paper, carefully making sure that all the vinyl is stuck down.

7

Your custom vinyl artwork is ready to display.
